

Mirazon Enhances Network Visibility and Management for Logistics and Supply Chain Provider

Mirazon provides Derby Supply Chain Solutions with managed network infrastructure services, supporting the design, deployment, and ongoing management of a scalable network environment. Through this partnership, Mirazon has helped improve consistency, visibility, and supportability across the organization's network.

Client	Derby Supply Chain Solutions
Location	Louisville, KY
Employees	201-500
Engagement	May 2026 - Ongoing
Services	Managed Network

The Situation

Derby Supply Chain Solutions is a third-party logistics provider supporting growing businesses with warehousing, fulfillment, and supply chain services.

As Derby Supply Chain continued to grow and expand its operational footprint, the IT team needed a trusted partner to help design, deploy, and manage a network infrastructure capable of supporting their evolving needs.

With these needs in mind, Derby Supply Chain Solutions partnered with Mirazon to:

- Implement managed services for network infrastructure
- Design a scalable and reliable network architecture
- Support deployment of network systems at a new facility
- Provide ongoing management, monitoring, and support

"The quality of their work has been excellent. Deliverables were thorough, reliable, and aligned with our technical standards and business needs. We would absolutely recommend Mirazon to other organizations looking for a knowledgeable, reliable infrastructure and managed services partner."

Joshua Taylor | Manager of Information Systems

The Solution

Network architecture design: The team evaluated infrastructure needs and designed a scalable, reliable network architecture aligned with operational standards and requirements.

End-to-end network infrastructure services: Mirazon provided comprehensive support across Derby Supply Chain Solutions' network environment, including design, configuration, deployment support, and ongoing management.

Infrastructure deployment & configuration: Mirazon configured and supported the deployment of switches, firewalls, wireless access points, and related systems to establish a scalable and fully functional network.

Centralized monitoring & management: Ongoing monitoring and management ensure the environment is continuously supported for stability, visibility, and performance.

Ongoing optimization & support: Mirazon provides continued troubleshooting, adjustments, and improvements to keep the network operating effectively.

The Results

Operational Network Readiness & Reliability

Mirazon successfully delivered the core network infrastructure needed to support operations at a new facility and connected it to the client's broader environment. With reliable connectivity, wireless coverage, and properly configured systems in place, the environment is stable, secure, and ready to support daily operations.

Increased Visibility & Consistency

With centralized monitoring and consistent network design, Derby Supply Chain Solutions now has greater visibility into its infrastructure. This improved consistency makes the environment easier to manage, maintain, and support over time.

Stronger Supportability & Management

The network is now more supportable across the organization, with better documentation, monitoring, and alignment to internal standards. This allows for faster troubleshooting and more efficient ongoing management.
